Control, Prevention & Time Allowance

Control:

- The control of bedbugs requires meticulous application.
- Treatment options are limited and the need for customer cooperation is essential. The client must assist in allowing access to all areas, removing clutter, laundering bedding and clothing and in some cases, disposing of contaminated beds and furniture.

Prevention:

- Encase mattresses and boxsprings in air-tight hypo-allergenic or plastic covers.
- Be careful when traveling abroad and when staying in hotels.
- Inspect your belongings carefully to prevent hitchhiking bedbugs.
- Do not introduce second-hand beds or furniture into your residence.
- Avoid clutter.
- Seal cracks and crevices.
- Vacuum regularly. Besides the floors, also vacuum mattresses, box springs, couches, arm-chairs, closets, shelving, and the inside of furniture, baseboards and window and door frames.

Bedbug Checklist:

- Follow guidelines provided on the separate list.

Time Allowance:

- Initial treatment may take up to 1 1/2 hours.
- The home or apartment must be vacated including pets for approximately 6 hours or until applied products are dry after treatment has been completed.
- When returning to the home/apt all windows should be opened for 30 minutes to provide ventilation.
- No surfaces should be cleaned or wiped down for at least 48 hours to provide maximum effectiveness.
